CONDUIT and NAWIPS Migration to AWIPS II
Status Updates

2014 Unidata Users Committee

NCEP Central Operations
March 31, 2014
CONDUIT
Cooperative Opportunity for NCEP Data Using IDD Technology

• CONDUIT content has remained the same for 2 years due to resource limitations on the existing systems, and moving support of these systems from the WOC to NCO.

• New CONDUIT systems in NCWCP are being tested with Unidata and will be operational by May 2014. These systems have significantly larger LDM queues and will allow for expansion of the datastream.

• Unidata and NCEP agreed to expand the CONDUIT datastream on NCWCP systems even though Boulder systems can not be expanded until mid-2015. This means CONDUIT will have a degraded backup in the event NCWCP is down.

• Once NCWCP CONDUIT boxes are operational we’ll revisit the last list of requested additions from 2012 and re-evaluate what should be added/deleted.
Upcoming MODEL Items of Interest

- **HIRES Window** – late May/early June 2014.
  - Separate East/West CONUS grids will be replaced by 1 full CONUS grid. Legacy East/West grids will stay on NOAAPORT, but full CONUS could be sent to CONDUIT.

- **GFS Upgrade to T1534 resolution** – late Summer 2014.
  - 0.25 degree output grids will be available and could be added to CONDUIT.

- **HRRR** – late Summer/early Fall 2014.
  - 2.5km CONUS NDFD grid will be available on NOAAPORT. Additional output on native 3km grid could be made available to CONDUIT.
AWIPS Status … It’s been almost a year

- Last brief to Unidata Users Committee was May 2013
  - Schedule tracking well with last year’s briefing / timeline

- NWS/WFO AWIPS II Deployment well underway

- All NAWIPS baseline functionality has been baselined in AWIPS II – OB14.2.1 (April/May 2014 Operational Deployment)

- Performance is at or better than NAWIPS

- Our focus since the last fall:
  - Fixing Critical, High, Major bugs,
  - Non-SBN dataflow,
  - Continuous build / development
  - system configurations,
  - support model
  - Testing Thin Client for COOP
AWIPS Status …
At the National Level

- All River Forecast Centers running AWIPS II
- All NCEP Centers running AWIPS II
- All Regional HQ sites running AWIPS II

**WFOs**
- 24 WFOs * (3 groups of eight) running AWIPS II
- 30-day test at Group 2 WFOs successfully completed February 24th @ 12Z
- Group 3 AWIPS II installations completed, March 10th – 19th
  - 30-day test planned to begin soon pending addressing a few outstanding technical issues
- Migration Target for all WFOs – FY15Q4

* OAX, BOU, OUN, HGX, HUN, BYZ, BOX, RNK, ARX, MKX, PQR, DMX, RAH, BOI, SLC, AFG MRX, PUB, MFL, CTP, OTX, GID, GJT, AFC
Latest Developments
National Center Perspective

Unidata Users Committee March 2014
Space Weather-Related Completed Functionality

- Solar imagery display in the NCP
- Ability to display Boulder Magnetometer Plot
- Ability to display earth-based gridded fields
- Solar Image Functions
  - Forecasters can request mathematical difference between images, by time or adjacent in sequence
  - Will use lessons learned for earth satellite function

Unidata Users Committee March 2014
GEMPAK and AWIPS II

• Background
  • The only datasets available on a AWIPS system are in the AWIPS database/HDF5 files, there will be no GEMPAK files available for the NCEP Centers
  • NCEP needed a way to access the database from the GEMPAK applications in order to migrate many legacy functions
  • AWIPS provides a method of requesting data using THRIFT via a combination of Python and Java code

• So…….
  • Functionality was added to the Data Management level of the file access which made it available to all GEMPAK programs that read data (writing back to the AWIPS database is not supported)
  • A new library of C source code for Data Access was added which calls Python scripts ($NAWIPS/scripts/python) to interface with the THRIFT request services and put the resulting information into GEMPAK data management arrays
  • The information to request for a particular data type is controlled by an XML table ($GEMTBL/data-access/*.xml), which specifies the Python script and the database query constraints
  • For more information:
Status of Trouble Ticket Reports

25 March 2014
- 41 Un-adjudicated

202 Open TTRs
173 Ready for Retest
85 CHM – 12+22+51 CHM

TTRs Classified as Critical / High / Major (CHM)
Repeatable problem that prevents or compromises the delivery of products or services

Critical - No alternate solution is available.
High - A temporary workaround is available, but is too cumbersome or workload intensive to sustain operations.
Major - A workaround is available to allow continuation of operations; however, workaround not acceptable for software acceptance.
Thin Client Status

- Thin Client is AWIPS II CAVE that runs in remote mode connected to an instance of EDEX via an Apache proxy server to access AWIPS II data.

- NCEP Centers are looking to using the Thin Client to support their COOP plans.
  - NCO/SDM and CPC have begun testing functionality.
  - NCO and RTS/Omaha have been tasked to provide capability to launch products remotely via the Thin Client ~ functionality expected by June 2014.

- Workstation / Laptop Specs Required for Thin Client

  **Linux OS**

  Table 14.3.1-2 lists the required and recommended hardware and software specifications for the ARD workstations at the CWSUs that will host the Thin Client on the Linux OS.

  **Table 14.3.1-2. Thin Client Linux Version Hardware/Software Specifications**

<table>
<thead>
<tr>
<th>Specification</th>
<th>Hardware/Software Requirements</th>
<th>Recommended/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Processor</td>
<td>Intel Xeon E5620</td>
<td></td>
</tr>
<tr>
<td>Memory</td>
<td>6GB</td>
<td></td>
</tr>
<tr>
<td>Disk Space</td>
<td>At least 1.5GB on the partition holding /awips2 (for the software installation); and at least 1GB per user on the partition that holds the user cache directories, which would usually be /home</td>
<td></td>
</tr>
<tr>
<td>Operating System</td>
<td>Linux</td>
<td></td>
</tr>
<tr>
<td>Video Card</td>
<td>Nvidia, OpenGL 2.0 or better, 512MB or more</td>
<td>Nvidia GPU Quadro FX 580 512MB GDDR3. Two graphic adapters, each capable of managing two screens (same as used in LX workstations)</td>
</tr>
</tbody>
</table>
Priorities in FY14 / FY15

• Shepherd Centers through final System OT&E, and finally into and through Field OT&E
  • Fix any critical bugs and improve performance as needed

• NCEP-focused software releases supported by Raytheon expected through this year

• Move forward with new development projects
  • SWPC migration
  • WPC “MasterBlender” Ensemble implementation in NCP
  • Migration of ATCF to AWIPS2
  • Hazard Mapping Service migration (NESDIS)
  • Dvorak Technique
  • Ecological (NOS HAB) and Arctic Techniques

• Planning of all development activity above and Centers’ new requirements
NCEP / Unidata Partnership

- For over 15 years NCEP has partnered with Unidata to provide and support NCEP software and data to the weather academia/research community

- After two year freeze for CONDUIT, expansion will be possible in late FY14 to early FY15 - Updates will be for the HIRES Window, HRRR and higher-res GFS

- NCEP would like to explore collaboration projects with Unidata in FY15
  - How can we work together to enhance the AWIPS experience at the Universities?

- NCEP continues to view Unidata as a critical partner for NCEP’s total mission
